

OKIB BEACH WATER SAMPLING RESULTS

Okanagan Indian Band recreational beaches are sample tested by the First Nations Health Authority; these water samples are collected to monitor and test for E.coli bacteria as this bacteria is commonly found in feces of warm blooded animals (including humans) and consuming this bacteria may cause illness.

Samples are classified as:

- Satisfactory: Samples taken over a 30-day period contain an average of LESS THAN or EQUAL to 200 E.coli bacteria/100ml.
- Unsatisfactory: Samples taken over a 30-day period contain an average of MORE THAN 200 E.coli bacteria/100 ml, and/or a series of single sample results EXCEED 400 E. coli bacteria/100ml.
